

iPad Use Instructions

1. Press and hold the button on the upper right corner of the iPad to power it on. When the white Apple logo appears in the center of the screen, you can release the button.
2. Press the circular home button (located in the bottom center of the iPad) to unlock the iPad and access the home screen.
3. Swipe on the screen to the left with your finger. In the upper left corner of the screen, you will see a “**System Files**” group. Tap the group, and then tap on the **Settings** icon.
4. In the Settings app, look to the left hand side of the screen, and then tap the second option from the top, which is “**Wi-Fi**.” A list of available Wi-Fi networks that are in your location will appear. Connect to one of the networks by tapping its name and then entering the password (if required). The library recommends connecting only to password protected Wi-Fi networks for the most security.
5. Now press the home button to exit **Settings**. Tap the screen to exit the **System Files group**. Swipe to the right to access the **Healthcare Apps** and **Safari web browser**. (See included list of healthcare apps and services for more information.)
6. Keep an eye on your battery life by checking the battery life icon in the upper right corner of the screen. If battery life drops below 20%, plug the iPad in with the included charger if possible.
7. When the iPad battery is fully charged (100%) do not leave the iPad plugged in. Leaving the iPad plugged in while fully charged can damage the iPad.
